

# Sustainable Sourcing Policy for Sunflower

## Introduction

Global sunflower production is mainly concentrated in Eastern Europe, with Russia and Ukraine accounting for more than half of the production. However, other regions such as Argentina, China, India and South Africa also produce this crop. Regardless of the origin, we expect our partners to respect the sustainability principles outlined in this document.

## Scope

This Policy applies to all suppliers of sunflower products in our supply chain, including sunflower oil and sunflower lecithin.

## Sustainable Sunflower Principles

The Barry Callebaut Supplier Code lays out our minimum requirements and expectations towards all our Suppliers. Adding on to or specifying the requirements from the Supplier Code, below we highlight some of the main principles which in our view are the foundation to creating a more sustainable sunflower sector:

- Promote the use of good agricultural practices, including nutrient management, pest management, and good environmental practices.
- Monitor and minimize the levels of pesticides and fertilizer applied to the crop, specifically with regards to insecticides.
- Protect, maintain and enhance biodiversity levels on the farm and prevent habitat loss.
- Protect carbon sinks and reduce tillage.
- Minimize water, air and soil pollution.

## Commitment

In order to meet our commitment of 100% certified or verified ingredients in all of our products and traceable to farm level by 2030, we require all suppliers to work with their supply chains towards the stated principles and to regularly show significant progress. This will be evaluated using accepted industry standards and certification schemes, namely

- Sustainable Agriculture Initiative (SAI), minimum silver level or benchmarked equivalent standards
- ISCC Plus

While recognizing that standards are evolving and that we cannot expect all of our suppliers to comply today, we are strongly committed to only work with suppliers who can demonstrate compliance to the above stated standards and principles by 2030.
