Good performance in developed regions

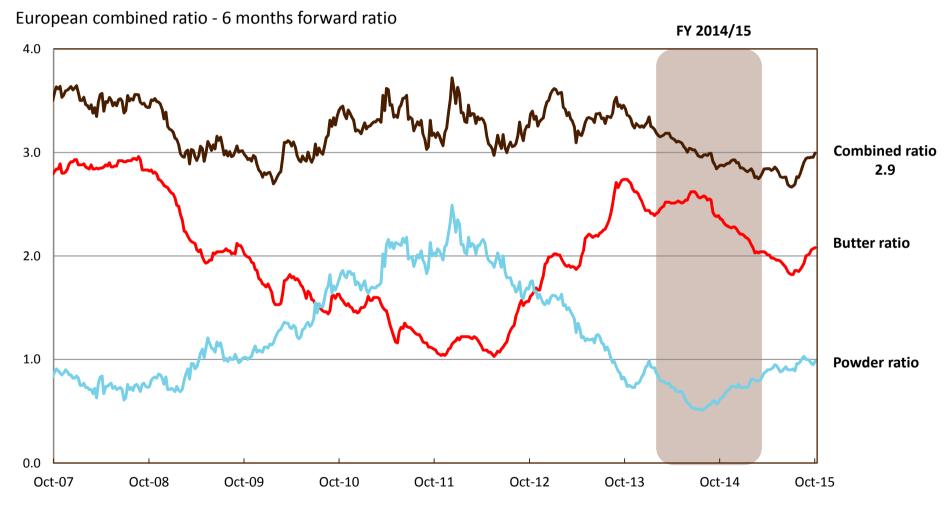

Gross Profit FY 2014/15

Gross profit up +4.8% in local currencies, due to solid volume growth, strong focus on margins and despite a historically low cocoa combined ratio

Cocoa processing profitability

Challenging cocoa market environment with negative impact from the cocoa combined ratio in FY 2014/15, strongly affecting current fiscal year

For cocoa processors, profitability depends on the ratio between input costs (price of cocoa beans) and combined output prices (price of cocoa butter and powder).

Outlook

Strive for smart balance between consistent, above-market volume growth and enhanced profitability

Mid-term guidance (until 2017/18)

We will strike a balance between volume growth and enhanced profitability as well as free cash flow generation: "smart growth"

- Average volume growth 4-6%
- EBIT growth on average above volume growth¹

Outlook

 Challenging fiscal year 2015/16 due to the current cocoa products market, which will temporarily affect our profitability

Thank you
